

ORGANIX MEMORY ENHANCERS

Do not forget that a good memory is VITAL to a happy life.

1. Mastermind

Unlock your true potential

Organix's mastermind is an advanced Brain Formula that is scientifically formulated to provide maximum support and nourishment to cerebral functions. One of its components, Huperzine A may have proven effectiveness in Alzheimer's disease and age-related memory impairment.

Another component is Sernol 95®, known as a Phosphatidylserine. Several double-blind studies suggest that Phosphatidylserine can help maintain cognitive function in older individuals and may be able to improve memory and learning skill in some. Phosphatidylserine is nutrient derived from Lecithin that is naturally occurring in brain cells where it's integrally involved in nerve impulses and the store and release of neurotransmitters. Phosphatidylserine readily crosses the blood brain barrier to help maintain the integrity of cellular membranes that diminish with age.

This unique formula has been used to greatly improve memory functions. The ingredients included here are exceptional and tested to help those with serious conditions.

The Formula:

Huperzine

Huperzine A (HupA for short), an alkaloid found in the Chinese herb Huperzia Serrata, is effective on improving cognitive and memory abilities, including those with Alzheimer's disease. In China, where Huperzine A is used for treating Alzheimer's and myasthenia gravis, medical scientist have studied its effects on the mental functions of elderly Alzheimer's patients. The researchers also set out to observe the action of Huperzine A on the damaging effects of oxygen free radicals in the patient's plasma and erythrocytes (red blood cells). Biochemical tests showed significant improvement, although not to the reference value for healthy people in the same age group. The authors speculate that the long-term treatment with Huperzine A might be required to optimize the results.

Ginkgo Biloba

Is generally accepted as a remedy for minor deficits in brain function, such as those that occur with advancing age. It may be useful in improving concentration and combat short-term memory loss due to clogged arteries in the brain, and to treat dizziness, ringing in the ears, headache, and emotional hypersensitivity accompanied by anxiety. Active compounds in Ginkgo extract assists in improving circulation, discouraging clot formation, reinforcing the walls of the capillaries and protecting nerve cells from harm when deprived of oxygen. These ingredients also appear to have an antioxidant effect, sparing brain tissue from the damage caused by free radicals. Included in this formula is Ginkgo Biloba and some of the benefits are: increased circulation in the head and brain area, helps in holding

attention span, helps prevent dizziness, memory loss, vertigo, strokes, heart problems and increases longevity.

Roseox ® - Helps regenerate other antioxidants. It is made from Rosemary extract and blended with an exclusive combination of herbs. It helps to improve the total antioxidant potential of Vitamin E.

L-Glutamine - Plays an important role in many functions of the body such as energy levels, intestinal health, protein synthesis, and healthy blood sugar levels through quick conversion into glucose. This important amino acid helps brain function as it converts quickly into glucose.

Gotu Kola - Has an energizing effect on the cells of the brain. It helps increase mental and physical power. Gotu Kola also helps with mental fatigue and is called food for the brain and much more. Assists in improving poor circulation in the veins.

Choline - Is important for normal cellular membrane composition and repair, normal brain function and normal cardiovascular function.

Ingredients: Huperzine A (Huperzia Serrate), Ginkgo Biloba Extract (24% Flavonoids 6% Ginkgolides), RoseOx® (min 6% Carnosic Acid), Sernol® (Phosphatidylserine), L- Glutamine (free form), Gotu Kola (4:1 ext Centella Asiatica) leaf, Choline (from Choline Bitartrate) Other Ingredients: Rice Flour, Silicon Dioxide, Magnesium Searate (Vegetable Source), Calcium Carbonate.

Recommended Dosage: As a dietary supplement, take one capsule each day, preferably in the morning or as desired. When conditions indicate problems of a more serious nature, take an extra capsule t mid day. Each capsule contains 310 mg.
