

ORGANIX WEIGH LESS SPECIALTY FORMULAS

1. CorT- B Plus

The New Science in Weight Loss

Because daily stress can cause the body to produce a fat storing hormone called cortisol which targets the abdominal area, our special formula CorT-B Plus was designed to help reduce the body's response to daily stress and naturally lower the fat storing cortisol hormone. Along with a proper diet and exercise, stubborn stress Fat deposited in the abdominal region may melt away with CorT-B Plus giving special attention to this hard to reduce area.

Cortisol is an important stress hormone that needs to be in balance. Most of us are under stress due to our life styles where we have little time for true rest and relaxation. After time, we start gaining weight, especially in the mid section (spare tire syndrome). This formula was designed to help balance the cortisol levels. Cortisol is the primary glucocorticoid produced by the adrenal cortex gland. Ninety percent of the secreted cortisol in circulation throughout the body is bound to protein, mainly to cortisol - binding globulin (cbg). Cortisol's principle physiological actions are:

- increase hepatic glycogenesis
- increase hepatic glycolysis
- Increase protein catabolism
- Inhibit ACTH secretion
- (negative feedback mechanism)

The Formula:

HOLY BASIL, main herb of this formula, which dates back many years. It contains 2% ocimum sanctum leaf which may help reduce stress and excess cortisol while helping to increase physical and emotional endurance. Holy Basil also may stimulate the immune system and inhibit the enzyme cox-2 that can cause inflammation.

MAGNOLIA, The second herb, equal in value in this formula, is concentrate. Its' action is similar to some of those found in Holy Basil, plus, it is helpful for digestion and is a mild laxative. Magnolia helps give a sense of well being.

GREEN TEA EXTRACT in this formula helps promote better metabolism and may improve one's energy level.

BITTER ORANGE is a safe and reliable replacement for Ephedra. It may help promote weight management by suppressing the appetite and increasing the energy level.

KAVA and SKULLCAP are calming herbs, each working on different parts of the nervous system. A small amount of each is used in this formula. Skullcap is especially effective in the head and spine.

CHROMIUM PICOLINATE is one of the most important, high quality minerals that are known to help with insulin metabolism. A lack of Chromium can cause low blood sugar in some people. Chromium can help lower high blood pressure and LDL cholesterol. If you are already taking Chromium, you may not be taking enough.

VITAMIN C and CALCIUM are in the formula also. They help to balance its effects. You will need to continue taking vitamin C and Calcium to obtain your daily recommended dose. You may want to try our Comb CalMag+H which is specific for helping with bone loss. Our DR-Ultra C+ is buffered and in capsules for easy absorption and has concentrated Rose Hips and 420 mg of Bioflavonoids

Recommended Dosage: Take two or three capsules with meals twice a day. Do not exceed six capsules a day. Bottled in 30's of 550mg

2. Hi-Energy Fat Burner

Feel great while you lose weight

Benefits:

- Increases the body's production of heat by activating the process of thermogenesis with out stimulants
- Contains no stimulants
- Helps maintain normal blood sugar levels
- Helps reduce fat and promote lean body mass
- Helps mobilize stored fat in and out of cells
- Increase energy, endurance and stamina during exercise

New! Cutting edge weight loss product that does everything a weight loss product should! Helps: Suppress Appetite, Support Adrenal Glands, Boost Energy, and Increase Metabolism! One of the few available in the market. All in one small, but powerful, revolutionary patch that you simply apply to your arm each morning. We know it works because many of our members have tested it and tell us that they are anxious to order this amazing new product! Here's the good news . . . We have made it even more effective by increasing the herbal ingredients by 50% and adding the Amino Acid Phenylalaine for more support. The first weight loss patch that safely activates the body's natural appetite controls.

Recommended Dosage: As a dietary supplement, take i/4 to ½ teaspoon daily or as needed. Bottled in 2oz bottles 400ppm.

4. Fat Tabs

Lipotropic weight loss system

New Suns Fat Tabs is an incredible nutritional advantage for supplementing any weight and fat reduction program. Use in conjunction with a sensible, low fat diet. This scientifically balanced blend contains a natural bio-available blend containing Choline-Inositol, Chromium Picolinate, L-Carnitine, L-Lysine, Methionine. Uva Ursi, Fiber and Betaine-HCL. These have been added for enhanced metabolic effect and increased energy.

Ingredients: Choline Complex, Methionine, Chromium Piccolinate, L-Carnitine Complex, L-Lysine, Inositol, Betaine HCL, Lecithin, Uva Ursi, Fiber, Fatty Acid Complex.

5. Thyroid Aid

Why did your last diet fail?... Could it be because of borderline thyroid problems?

According to reports, millions of people have malfunctioning thyroid glands and do not know it. Many millions more are potential 'borderline' thyroid deficient and also do not know it. One of them may be you! Find out from one of our Certified Iridologists if you are a candidate for this deficiency.

You too may test yourself and check if you are borderline thyroid deficient or sub-clinical poor thyroid health.

- Do you have problems losing weight?
- Do you experience occasional mood swings?
- Do you feel bloated?
- Do you have problems concentrating?
- Do you regularly feel fatigued in the middle of the day?
- Is your hair dry and lifeless?
- Are your nails easily broken?

If you answered YES to two or more of the above questions your weight loss could benefit with Thyroid Aid.

It is a fact that thyroid hormones are responsible for the conversion of stored body fat into free fatty acids- the only form of fat the body can use for fuel. Thermogenesis or loss of body fat can not occur with our adequate thyroid hormones making sufficient free fatty acids available for fuel. Thyroid hormones make the body more sensitive to norepinephrine, the neurotransmitter or chemical messenger responsible for activating the fat burning process. This means that low norepinephrine is required to utilize free fatty acids for energy, reducing unsightly body fat stores in the process.

It is common sense that when one indiscriminately reduces caloric consumption in order to reduce weight, the nutritional support for the thyroid is also reduced and may lead to 'borderline' thyroid function. The decrease of thyroid support may lead to the 'weight loss plateau' and ultimate diet failure.
